According to her, this was the average space taken by an average American family in the building of their own houses from scratch. She said she had already spent USD 80,000 on the architectural design, and she had not even begun! When she saw my eyes widen at the costs, she said, What, your houses in your country or anywhere else, are not so large? And the house building costs do not come in thousands and thousands of dollars? Well, I could tell her that in our country and in other parts of the World, our built houses especially colonial bungalows, ancestral homes/haciendas and I have lived in them were made on land just under 1 acre and even much more, so I was not anyone to talk about 2,600 ft.?. Nevertheless, I began to think that a book was needed to tell people all about how for millenniums, people have been living in really tiny spaces, in tiny homes, and they have managed extremely well. So this book is going to tell you all about some traditional ways in which you can build a really nice tiny home. But here you are

going to think of a state of mind and a possible situation, where we are in survivalist mode. This tiny home is a shelter, for the family to protect it from the weather, animal attacks, a place to live in, eat, and sleep, and I am going to go back to the history of these houses, down the centuries all over the World. This book is going to give you lots of information on how these houses were built and how can you build these houses yourself, especially when you need to know how to build a shelter for your family.
