

The Truth About Prostate Health: Prostate Cancer, Prevention, Cancer Life Extension

By age 30, 10% of men have benign prostatic hyperplasia (BPH), by age 60, 50%, by age 80, 90% causing symptoms and cancer risk. One in six develop prostate cancer. Those with prostate cancer today live no longer than those who had it in 1920. Treatments produce the same length of life, but when you modify your lifestyle, you may live longer. Dr. Simone reviews how prostate health can be yours. Since genetics cause only 7% of cases, you have control. Dr. Simone, a world renowned cancer specialist, is brave enough to share with you the truth about BPH and prostate cancer without emotion or influence from the medical establishment, pharmaceutical industry, national organizations, special interest groups or government agencies. Be your own advocate. Don't leave it to others. You can virtually control the destiny of your health. By following his easy Ten Point Plan, you can minimize BPH, reduce the risk for prostate cancer, or, if you have prostate cancer, you can help extend your life. The choice is yours.
