

The Fundamentals of Soviet Razvedka (Intelligence/Reconnaissance)

Intelligence, simply defined as knowledge of the enemy and his intentions, is seldom a decisive factor in war. It does not alter the strength of contending armies and the overall war aims of contending states, and it may have little effect on the planning and conduct of operations. A force which lacks good intelligence may still succeed because of its strength, sound planning, and military efficiency. The converse is also true. Sound intelligence, however, can affect a nation's decision to go to war in the first place; and, once that nation is at war, it can reveal enemy intentions and dispositions. While providing a foundation for sound planning, it also forms a basis for conducting and verifying the effects of deception. Consequently, intelligence provides leverage with which to accentuate the positive effects of military actions, be they offensive or defensive. Intelligence collection, analysis, and exploitation is a difficult process, made more so by the fog of war and by chance, which makes its effects even less predictable. Throughout the twentieth century, the growing complexity, scale, and technological content of war have provided greater opportunity for intelligence collection, while, at the same time, complicating the process of analyzing and exploiting its effects. Few nations have developed a healthier respect for the relationship between intelligence and warfare than has the Soviet Union. The four years of warfare on the Eastern Front during the Second World War, known by the Soviets as the Great Patriotic War, were unprecedented in scale and intensity. From the commencement of Barbarossa on 22 June 1941 to the end of the European war in May 1945, intelligence played a significant role in the course and outcome of operations. Most Westerners have only a sketchy awareness of that role. The Soviet intelligence failure of June 1941 and the apparent intelligence success at Kursk in

1943 have received attention in numerous works. Yet the appreciation of both has been, at best, superficial, replete with generalizations which have characterized most descriptions of war on the Eastern Front.
