If you or a loved one has been newly diagnosed with epilepsy, you need to know you are not alone. 65 millions people around the people have epilepsy. Today only, get this Amazon bestseller for just \$2.99. Regularly priced at \$4.99. Read on your PC, Mac, smart phone, tablet or Kindle device. Epilepsy is the tendency to have seizures that start in the brain. The brain uses electrical signals to pass messages between brain cells. If these signals are disrupted, this can lead to a seizure. Epilepsy is usually diagnosed when someone has more than one seizure. Seizures can vary a lot. They can affect your feelings, awareness or movement. Different types of seizures involve different things. These may include confusion, strange feelings, repetitive movements, blank moments (where you are briefly unconscious), muscle jerks, sudden falls, or convulsions (jerking movements while unconscious). Sometimes other conditions can look like an epileptic seizure, for example fainting. Doctors will check for other conditions as well as epilepsy before you are diagnosed. See more about diagnosis. If you have epilepsy, you may feel ok about it, or you may have questions or worries. Your epilepsy and your choices in life may feel like big issues. This book is here to provide you with a basic and sound understanding of what this condition is about and what you can do about it in order to help friends, family or yourself.
